Summary

Computer Science Engineering graduate with hands-on experience in troubleshooting applications, APIs, databases, and cloud-integrated systems. Strong foundation in computer networks, operating systems, SQL, and end-to-end debugging. Proven ability to analyze incidents, document solutions, and collaborate across teams to resolve technical issues efficiently.

Education

Sahyadri College of Engineering and Management, BE in Computer Science Oct 2020 – May 2024

- **Coursework:** Computer Architecture, Comparison of Learning Algorithms, Computational Theory, Data Structure and Algorithms, Operating Systems, Software Engineering, Computer Networks, Web Technologies

Experience

Data Science and Machine Learning Trainee, Nucot – Bangalore Sep 2025 – Nov 2025

- Investigated data pipeline issues, model failures, and data inconsistencies by debugging Python scripts and SQL queries.
- Analyzed root causes for incorrect outputs and implemented fixes, reducing recurring issues by 30%.
- Collaborated with peers and mentors to explain technical findings to non-technical audiences.
- Created clear documentation and dashboards to communicate insights and system behavior.

Full stack developer intern, Swizosoft – Mangaluru Feb 2024 – Mar 2024

- Diagnosed and resolved frontend and backend issues across React, Node.js, and MongoDB environments.
- Supported API debugging using Postman, identifying request/response failures and fixing data flow issues.
- Worked in a team-based environment handling multiple tasks and priorities in a fast-paced setup.
- Assisted in deployment validation and ensured application stability across browsers and devices.

Certifications

Google Data Analytics Professional Certificate - Coursera Oct 2024 - Jan 2025

AI Prompt Engineering Professional Certificate - Coursera Oct 2024 - Dec 2024

Projects

Cryptocurrency Trend Forecasting System (End-to-End Web Application)

- Developed and debugged a real-time data pipeline integrating multiple third-party APIs (News API, Market Data) to feed a predictive analytics engine.
- Architected a Streamlit-based dashboard, ensuring cross-platform compatibility and high availability for end-users.
- Troubleshoot and resolved complex integration issues between Python backend services and frontend visualization tools, maintaining 99% uptime during live testing.
- Technical Stack: Python, API Integration, Streamlit, Git, Environment Management (Conda/Pip), Data Processing.

Live Demo: [crypto-trend-predictor-live](#)

GitHub: [github.com/mithunskumar069/crypto-trend-predictor](#)

Auto Ambulance System

- Built an Android application enabling real-time ambulance booking, GPS-based location tracking, and automated nearest-driver assignment.
- Designed admin and driver modules using Firebase Realtime Database and Google Maps API to support live notifications, navigation, and ambulance detail delivery to users.
- Worked on real-time data synchronization between mobile application and backend services to ensure consistent updates across user, driver, and admin interfaces.
- Technical Stack: Java, XML, Android Studio, Firebase Realtime Database, Google Maps API

Predicting goat health using IOT and ML

- Built end-to-end monitoring and troubleshooting of an IoT-based system by investigating sensor data issues, connectivity failures, and abnormal readings, ensuring reliable real-time system operation.
- Performed root cause analysis through systematic testing and validation to diagnose data inconsistencies and simulated incident scenarios, improving system stability and accuracy.
- Implemented alerting and notification mechanisms for anomaly detection and documented issues and resolutions, supporting proactive issue resolution and continuous system improvement.
- Technical Stack: Arduino IDE, ESP8266, IoT Sensors, Android Studio

Skills

Technical Skills

- Python, SQL, Git
- REST APIs, Postman
- Windows and Linux fundamentals
- Computer Networks (DNS, HTTP, TCP/IP)
- Debugging and log analysis

Tools

- VS Code, Jupyter
- Power BI, Excel
- GitHub
